SUMMARY

Final-year Computer Science student specializing in Machine Learning, Deep Learning, and full-stack AI application development. Experienced in building and deploying end-to-end ML pipelines, REST APIs, and data-driven web applications using Python, PyTorch, and FastAPI. Seeking an AI/ML Engineer or Data Scientist role to apply computer vision, model deployment, and GenAI integration skills in real-world products.

EDUCATION

G M Institute of Technology <i>Bachelor of Engineering in Computer Science</i>	2022 – 2026 CGPA: 8.5
GM Hallamma PU College <i>Pre-University (PUC)</i>	2020 – 2022 80.5%
Sri Someshwara Vidyalaya, Davangere <i>Secondary School (10th)</i>	2020 89.92%

INTERNSHIP EXPERIENCE

Python Full Stack with Gen AI Intern <i>Dhee Coding Labs</i> - Built and deployed full-stack web applications using Python, Flask, and REST APIs integrated with Generative AI models. - Designed end-to-end data pipelines and automated workflows, reducing manual processing effort across multiple modules.	Jan 2026 – Present
SPARK AI Research Intern <i>Subbaiah Research Institute & JNN College of Engineering</i> - Developed AI-driven healthcare applications using machine learning and deep learning on real-world clinical datasets. - Executed data preprocessing, model training, and evaluation workflows, improving model reliability in a research setting.	Oct 2024

PROJECTS

OncoAI Breast Cancer Detection – Computer Vision, Transfer Learning - Engineered a deep learning pipeline using Vision Transformers and transfer learning to classify histopathological images, achieving 91% accuracy on a dataset of 10,000+ images. - Optimized model performance through data augmentation, preprocessing, and fine-tuning; built efficient feature extraction and evaluation pipeline.
EchoSphere Deepfake Audio Detection – NLP, FastAPI, REST API, Docker - Deployed a real-time deepfake audio detection system using ECAPA-TDNN speaker embeddings and MLP classifier via a FastAPI REST API. - Integrated SHAP explainability for interpretable predictions; containerized with Docker and automated testing via CI/CD pipeline.
Student Placement Predictor Machine Learning, Streamlit, Explainable AI - Trained a logistic regression model on historical student data; applied SHAP feature importance analysis to identify the top 5 placement drivers. - Delivered an interactive Streamlit UI enabling recruiters and students to explore placement predictions in real time.
Personal Portfolio Website HTML, CSS, JavaScript, GitHub Pages Designed and deployed a fully responsive personal portfolio using HTML, CSS, and JavaScript, hosted on GitHub Pages.

TECHNICAL SKILLS

Languages: Python, SQL	Web & API: HTML, CSS, REST API, FastAPI, Flask, Streamlit
ML / AI: Machine Learning, Deep Learning, Computer Vision, NLP, Transfer Learning, Model Deployment	
Libraries: PyTorch, Scikit-learn, Pandas, NumPy, SHAP	DevOps & Tools: Docker, CI/CD, Git, GitHub, Agile
Core Concepts: Data Structures, OOP, Data Pipeline, Explainable AI, Version Control	

CERTIFICATIONS

DevOps Fundamentals – Udemy: CI/CD pipelines, containerization, version control, and deployment workflows.
Agile Fundamentals – Udemy: Agile methodologies, sprint planning, and iterative development.
